TRONIX ROPE LIGHT

Rope Light is designed for decorative lighting purposes and makes a perfect outlining tool. It is an easy and cost-effective solution for a broad range of applications: from small accent lighting tasks to eye-catching party and event lighting effects.

Tronix Rope Light is available in LED or incandescent, low and high voltage, 2 or 3 wire rope and offers a wide range of style and colors. LED rope light is just as bright as incandescent rope light, but uses two-thirds less energy and offers a large choice in colors. Tronix Rope Light includes a power cable and is equipped with a clear PVC tubing.

CONTROLLERS AND ACCESSORIES

Our wide selection of Rope Light accessories stands for custom-made solutions and a wide range of installation possibilities. 2 or 3 wire controllers are available to create flash or chase light.

Note: All 12 and 24 volt rope lights require a transformer

Rope Light

GENERAL INSTRUCTIONS FOR USING ROPE LIGHT

1. Make sure the power is switched off during installation. Never connect the mains voltage while the light tube is still on the reel; the heat development can cause fire. Never cover the light tube while lit.
2. Check whether the mains voltage of the Rope Light corresponds with the mains voltage of the power supply.
3. For LED Rope Light 230V and low voltage connected to a transformer, always use a power cable with converter, otherwise the LEDs will flicker. For low voltage it is best to use a stabilized DC power supply in which case you don't need a converter.
4. Only cut the Rope Light at the identification mark, otherwise part of the tube will be permanently useless. Make absolutely sure that the mains voltage is not connected. Use a pair of sharp cutting pliers and make sure the edge is smooth and at the right angles.
5. Mains supply cable and connectors.
6. Always seal the end of a (cutted) cable with an end cap, which must be glued on with pvc or silicon glue.
7. **Assembly**

Assemble the Rope Light in such a way that there is sufficient ventilation and the heat can flow off. Do not assemble on surfaces that can vibrate or rattle violently due to severe wind. Decorations that are spanned over the road or are applied at shopping centers must be allowed some movement with the wind. Assemble the tube face front (the part producing the most light) and only cut the rope light per complete unit and at the identification marks such as shown in the following diagram .

8. Installation

Depending on the specific circumstances different fixing material are available. Use tie-wraps along a steel wire or preshaped frame ; for outdoor usage take the UV-durable quality. An aluminium channel is available for straight lines such as PVC, PET . Crocodile clips and mounting clips can be used for both straight and bent lines. Affixation distance: the recommended distance for clips and bundling straps; horizontal 20 cm and vertical 30 cm. Make sure the Rope Light is not twisted .

9. Expansion

Aluminium channels have a coefficient of expansion , meaning that the difference in length per 2 meter can increase with several millimeters. Make sure to keep about 4mm of space between two channels.

10. Preheating and use

It is important to preheat Rope Light (especially at low outside temperatures) before starting to use the material. You can do this by connecting the required length to the mains supply , allowing the Rope Light to burn for a couple of minutes until it is flexible. Especially when making bends it is very important to preheat the rope . Disconnect the mains supply before starting the assembly. Always unwind Rope Light from the reel, this prevents loops or swaying which could damage the internal wiring.

11. Bending

It is very important to bend Rope Light perpendicular - straight up or down - at the wires. Make absolutely sure to bend rope light in the right direction, up or down, making sure that the two internal wires make the same curve. Avoid at all times that one of the two wires (the inner side one) needs to make a very sharp curve because of wrong bending. Bending rope light incorrectly can cause damage to the internal wiring. Please see drawing below for illustration.

12. Please always read the user manual carefully before installation. A User Manual for Rope Light is supplied with delivery or can be downloaded on our website www.tronix.nl

CORD LIGHT PROFESSIONAL

Cord Light Professional

4 types of LED Cord Light Professional:

1. CORD LIGHT REGULAR

Cord Light Regular with 30mm side branch is available in 12 & 24 Volt. The long length makes it perfect for decorating bigger trees. Available for indoor and outdoor use.

2. CORD LIGHT IN-LINE

Cord Light in-line with 5mm LED is available in 12 & 24 Volt. The in-line LED's are perfect to follow branches. Available for indoor and outdoor use.

3. GARLAND CORD LIGHT

Garland Cord Light with 70mm side branch is available for in- and outdoor applications. The extensive length and long side branches are ideal for decorating (bigger) garlandes. Available for indoor and outdoor use.

4. CLIP LIGHT

Clip Light is perfect for decorating larger trees by following the branches.

**LED Clip Light 24V can be cut every 6 LED.*

Note:

Never wind the wire in this way around the branch, the branch will grow and break the wire. Better lead the wire in line with the branch and use a rubber tie tube to keep the wire in place. Never use tie-wrap, as this will kill the tree.

Candle Lights

As Tronix, we may say we are experts in the electronic candle light business. We have been at the very base of developing and producing these amazing products and have already sold millions of them. We basically sell two kinds: a small led candle with the size of a waxine light that operates over 12 hours after one night charging, and a large one operating for more than 24 hours after the same amount of charging time.

For home use, the small one is most popular, because this one fits in any regular or decorative glass also used for traditional waxine lights. Professional users like e.g. hotels and restaurants generally prefer the larger model.

The candles are also very suitable for children who can safely use them as a night light. The flickering of the candle light also helps them to fall asleep more easily.

The advantages of LED Decorative Christmas Lights

In the past, Christmas lights were incandescent bulbs encased in painted glass. They were large, burned hot, broke easily and flaked with age. Often when one bulb was broken, the entire string failed to light. Today's Christmas lights use LED-light emitting diodes-light bulbs. There are many benefits to using LED bulbs as opposed to incandescent bulbs.

LOWER COST

LED Christmas lights demand far less electricity to operate than their incandescent counterparts---they cost almost 90% less to operate.

EASIER STORAGE

Due to the durability of LED Christmas lights, they are very easy to wrap up and store for later use. Worries of bulb breakage are no longer a concern. The bulbs withstand abuse and moisture without deleterious effects.

VARIETY

LED Christmas lights are available in various sizes and styles. The miniature size of LED's has opened the door to a much higher variety of colors – including beautiful, warm white – and many new applications such as cluster lighting and animation effects like twinkling, snowfall or waterfall, adding up to the amazing lighting results of our Modular Lighting Connection System.

SAFETY

LED lights do not heat up. They are far safer and don't cause fires. The older incandescent bulbs gave off most of their energy in the form of heat. This meant a higher risk of fire during the Christmas season.

LONGEVITY

Because LED lights do not burn hot, they last an extremely long time. Also, because they do not contain delicate filaments, LED lights can withstand light impact without breaking. When they are properly taken care of, LED Christmas lights will last for years.

WEATHERPROOF

LED Christmas lights function just as well outdoors as they do indoors. They are constructed in such a way that they are impervious to moisture, heat and cold.

BRIGHTER

LED Christmas lights are brighter than lights of the past. In addition, the brightness of these lights does not fade that much over time.
